

Neuron Bundle 16: Trapcode Shine

Ultra fast light ray effects!

Create compelling light effects without leaving your editing timeline, and without the tedious render times of specialized 3D applications. Sunshine through clouds, headlights through fog, or horror movie titles: Shine does it all. Choose from 22 powerful presets, or make your own light ray effects from scratch. 16 bit support guarantees high-quality light effects for any project. Unique controls create shimmering lights that animate efficiently.

Highlights

Powerful interface

Shine's interface makes it easy to customize your own light effects. Fine-tune source point, ray length, shimmer appearance, colorization, opacity, and a full range of compositing modes.

Multi-color presets

For movie titles, choose from multi-color presets such as simple fire, green X-Ray, and Radioaktiv. Or for more subtle effects, you can extract colors from an existing logo or title, or make beveled effects with the alpha edges feature.

Shimmering controls

Flexible shimmer settings let you create automatic, loopable variations that add visual interest to light effects without the rendering overhead of complex compositing. Shimmer controls can also be used to create seamless loops of any desired length for attractive DVD backgrounds.

Features

Fast Rendering

Renders light rays quickly at 5-10 frames per second.

High-resolution imagery

Delivers highest-quality images with 16-bit support for Quantel.

Customizable Color

Numerous coloring options include 3- and 5-color gradients with tweakable coloring presets.

Compatibility

Works on any layer as a part of more complex animation effects.

Transfer Modes

Built-in transfer modes support makes it easy to create complex light effects.

Mask Controls

Threshold and circular mask controls make it easy to get the effect you want.

About VDS

VDS provides automation and content design tools for the broadcast, cable television, internet, and post production markets. VDS products automate broadcast television systems, with an emphasis on graphics-related operations, content and digital asset distribution, graphics and promo automation, and internet-to-broadcast systems. These products are used in sports, news and financial broadcast channels as well as in multichannel broadcast and cable facilities. VDS content creation products are tools that deliver graphic design, universal file translation and integration capabilities for the post product and broadcast markets.
